

Dashboard Overview

This document provides a summary and documentation of the **4-page Power BI Mutual Fund Analytics Dashboard**, along with the **NAV Detail drill-through page**.

The four main dashboard pages present interactive analysis of mutual fund industry trends, fund performance, investor analytics, and SIP and market trends using the cleaned and processed mutual fund datasets. An additional NAV Detail page is provided as a drill-through page, allowing users to view detailed NAV information for a selected mutual fund scheme.

The dashboard was designed to provide users with an interactive way to explore important financial and investor-related metrics through KPI cards, charts, tables, slicers, and cross-filtering.

Page 1 — Industry Overview

The **Industry Overview** page provides a high-level view of the mutual fund industry.

Key Analysis

- Overall industry-level metrics
- Fund house and AUM-related analysis
- Industry AUM trends
- Comparative visualizations
- Summary KPI cards
- Interactive filtering using slicers

Purpose

This page provides an overview of the size and development of the mutual fund industry and allows users to compare industry-level metrics across different time periods and selections.

Page 2 — Fund Performance

The **Fund Performance** page focuses on the performance of individual mutual fund schemes.

Key Analysis

- Fund performance comparison
- Return-related metrics
- CAGR and other performance measures
- Fund-level comparisons
- Performance rankings
- Interactive charts and tables

Purpose

This page allows users to compare mutual fund schemes and identify funds with stronger historical performance using the available return, risk, and performance metrics.

Page 3 — Investor Analytics

The **Investor Analytics** page focuses on investor activity, folio trends, and transaction-related information.

Key Analysis

- Investor and folio trends
- Investor transaction analysis
- Category-level investor activity
- Transaction trends over time
- Interactive filtering using slicers

Purpose

This page helps analyze investor participation, transaction patterns, and changes in investor-related metrics over time.

Page 4 — SIP & Market Trends

The **SIP & Market Trends** page focuses on SIP activity and category-level market trends.

Key Analysis

- SIP inflow trends
- Category-wise inflow trends
- Monthly and period-wise analysis
- Market trend visualizations
- Category-level comparisons

Purpose

This page helps users understand how SIP activity and category-level inflows change over time and provides a comparative view of market-related movements.

NAV Detail — Drill-Through Page

The **NAV Detail** page is an additional drill-through page and is separate from the four main analytical dashboard pages.

It provides detailed NAV information for the mutual fund selected from the **Fund Performance** page.

Key Analysis

- Detailed NAV history for the selected fund
- Date-wise NAV information
- Fund/scheme-specific analysis
- Selected-fund filtering
- NAV trend visualization

Purpose

This page allows users to move from the high-level fund performance analysis to a more detailed view of the selected fund's NAV history.

Drill-Through Functionality

The NAV Detail page is connected to the Fund Performance page through **Power BI drill-through functionality**.

When a user selects a fund from the relevant fund table and performs the drill-through action, the NAV Detail page displays information corresponding to the selected fund.

This allows users to move from a high-level performance view to detailed NAV information without manually searching for the fund again.

Interactive Slicers and Filtering

The dashboard uses interactive slicers to allow users to dynamically filter the information displayed on the dashboard pages. The slicers are configured according to the analytical requirements of each page, such as Year, Category, Fund House, State, Age Group, or other relevant fields.

The slicers are connected to the relevant dashboard visuals so that selecting a value updates the corresponding charts and tables.

Slicer Verification

The slicers were checked across the four main dashboard pages to confirm that they are interactive and connected to the relevant visuals.

When a slicer value is selected, the corresponding charts, tables, and KPI visuals update according to the selected filter. This confirms that the slicers are functioning as interactive filters rather than static controls.

For example, selecting **Category** updates the relevant visuals to display information corresponding to the selected filter. The same interactive filtering behavior is available on the dashboard pages where slicers are provided.

Slicer Evidence

Before applying the slicer: The dashboard visuals display the unfiltered available data.

After selecting/checking a slicer value: The relevant charts and tables change according to the selected filter, demonstrating that the slicer is actively filtering the dashboard visuals.

The screenshot included in this documentation provides evidence that the slicer is functional and connected to the relevant dashboard visuals.

Data Sources

The dashboard was developed using the cleaned mutual fund datasets available in the project.

The analysis uses datasets covering the following areas:

- Fund master information
- NAV history
- Fund house AUM
- SIP inflows
- Category inflows
- Folio counts
- Scheme performance
- Investor transactions
- Portfolio holdings
- Benchmark indices

A separate **DateTable** is used to support time-based filtering and analysis where applicable. The datasets were cleaned and processed before being used for dashboard development and analysis.

Dashboard Interactivity

The dashboard provides interactive exploration through slicers and visual interactions available across the dashboard pages.

Depending on the analytical page, users can filter and explore information using:

- Year filters
- Category filters
- Fund house or fund/scheme-related filters
- Date-based filtering where applicable
- Interactive charts
- KPI cards
- Tables
- Cross-filtering between visuals
- Drill-through navigation to the NAV Detail page

The interactive design allows users to investigate the mutual fund data from different perspectives rather than relying only on static summaries.

Key Dashboard Features

The final dashboard provides:

- **4 main analytical pages**
- **1 NAV Detail drill-through page**
- Interactive slicers
- KPI cards
- Charts and visual comparisons
- Fund performance analysis
- Industry-level analysis
- Investor analytics
- SIP and market trend analysis
- Cross-filtering between visuals
- Time-based analysis
- Category-level analysis
- Drill-through navigation

Conclusion

The **4-page Power BI dashboard**, together with the NAV Detail drill-through page, provides an interactive analytical view of the mutual fund industry.

Each of the four main pages focuses on a different analytical area while allowing users to filter and explore the underlying data through interactive slicers and visual interactions.

The dashboard combines cleaned datasets, calculated performance metrics, visual analytics, and interactive filtering to provide a consolidated view of mutual fund industry trends, fund performance, investor activity, and SIP/market trends.

The additional NAV Detail drill-through page provides a more detailed view of NAV history for individual selected funds, extending the dashboard from high-level analysis to fund-level detail
